MDA Information Systems, Inc. and Riverside Technology, inc. Introduce Weather and Hydrology Information Portal (WHIP)

GAITHERSBURG, Maryland, March 8, 2012 - MDA Information Systems, Inc. and Riverside Technology, inc. have partnered to produce an enhanced web-based subscription service known as the Weather and Hydrology Information Portal (WHIP).

WHIP offers 24/7 access to the Western Utilicast, a water supply forecast for the key hydro areas of the Pacific Northwest. WHIP offers more frequent updates to the forecast (previously available only once per week), and provides probabilistic diagrams, reservoir storage diagrams, and soil and snow information.

Updated daily, users will view detailed graphs, historical information, and read discussions provided by the scientists at both MDA and Riverside. Grand Coulee and The Dalles are two locations immediately available on WHIP, and the Portal will add locations based on client demand.

"We are very excited about this opportunity," said Larry Heitkemper, Vice President of Weather Services for MDA. "We are continuously striving to improve the way our clients view and receive this information, and WHIP does just that."

Riverside's President and Chief Executive Officer Larry Brazil stated that the company is looking forward to extending its partnership with MDA. "It is important to provide information to our joint customers in a systematic format using today's technology, which better prepares them to make decisions regarding water supply issues," Brazil said.
