**Riverside Moves to No. 8 On The 'Mercury 100' List**

**June 9, 2009 – Fort Collins, CO – Riverside Technology, inc.** – Riverside has moved up on the Northern Colorado Business Report's Mercury 100 list.

Each year the Northern Colorado Business Report generates the Mercury 100 Fastest-Growing Private Companies list for the Northern Colorado region. The list is based on revenue growth for the past three years (2005–2008) and consists of two categories: the top 50 companies generating revenue *over* \$2 million and the top 50 companies generating revenue *under* \$2 million. In 2008, Riverside generated over \$19 million in revenue and moved up on the Mercury 100 list from number 23 to the 8<sup>th</sup> position with a revenue increase of 240%. This was the fifth consecutive year Riverside made the list.

"I'm extremely pleased with the results of this past year's revenue growth. In these economic times, to be able to generate such a substantial increase in revenues says a great deal about our employees," stated Larry Brazil, president and CEO of Riverside. "We've been able to achieve our success by everyone pulling together, meeting client deadlines and delivering superior services."

Riverside staff has grown steadily the past three years, adding over 25 employees. Earlier in 2009, Riverside moved to a new facility located at 2950 East Harmony Road in Fort Collins, CO. This new location is energy efficient, offers additional room for employee growth, and boasts a panoramic view of the Fort Collins area.

While the majority of employees work in the Fort Collins, CO and Silver Spring, MD offices, Riverside employees are also working on projects in other locations throughout the United States and on international projects throughout Asia, Africa, and South America.

Riverside Technology, inc. (Riverside) is an international science, engineering, and IT consulting company providing decision makers with technology solutions, information, and analysis tools. With offices in Fort Collins, CO and Silver Spring, MD, Riverside provides clients, such as NOAA, services in areas such as: information technology, atmospheric science, water resources management and modeling, and geographic information systems. In business for over 20 years, Riverside has performed more than 1,000 projects in over 30 countries worldwide.
